Associate Consultant

Remote | United States

About NavLabs
NavLabs is a boutique consultancy that builds powerful workflows and beautiful apps that are a joy to use for customers ranging from leading Fortune 500 firms, to aerospace startups, to federal, state, and local government agencies. We make building complex business software simple and quick by using [Appian](), an industry-leading AI-powered process automation platform, as well as other low/no-code automation and AI technologies that excel in rapid application development. We're driven by two passions: creating enormous value for our clients and cultivating a company of super-happy employees. We hire the brightest employees and maintain a culture of candor where the best ideas win.

Job Description
Marry your passion for technology with a penchant for strategic problem-solving as a full-time NavLabs Associate Consultant. In our innovative, flexible work environment, you will build and deploy applications on the Appian platform that power enterprise customers' most complex business workflows. We'll teach you to be an Appian software and agile delivery expert from the ground up. Implement your first business application, then scale a program across the enterprise. The ideal candidate will be a self-motivated problem solver with a passion for technology and an understanding of agile methodologies.

About You:

- You're smart, curious, and love problem-solving
- You are engaged: you listen to our clients, understand problems, and dedicate your time to solving them.
- You learn quickly and don't hesitate to ask for help when needed.
- You get to the crux of an issue by asking great questions.
- You aren't satisfied with the status quo; you aspire to improve yourself and the world around you.
- You've demonstrated past success in cross-functional teams building products, preferably using agile methodologies.
- You have excellent communication skills and can work independently or as part of a team.
- You're self-motivated to stay up-to-date on the latest technology trends and look to share knowledge and expertise with other team members.

Qualifications:

- Bachelor's degree in computer science, information technology, STEM, or a related field

- 0-1 years of experience in software development, preferably using the Appian platform
- Basic understanding of agile methodologies (Scrum)

Preferred Qualifications:

- Appian Associate Developer Certification
- Strong understanding of agile methodologies (Scrum)
- Experience with relational databases (MySQL, Oracle, SQL Server)
- Experience in software consulting
- Experience with object-oriented languages (Java, JavaScript, .Net)

To Apply

Please email jobs@nav-labs.com with your resume and three sentences on why you're interested in joining our team. We're big on "show not tell" and invite you to share any work you're proud of: a GitHub repo, blog you wrote, photo portfolio, song you composed, or anything else that expresses your idea of excellent work.
